Application/Control Number: 10/657,575

Art Unit: 2838

1. The disclosure should be carefully reviewed and ensure that any and all grammatical, idiomatic, and spelling or other minor errors are corrected.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Forster et al. (U.S. Pat. No. 6,204,693).

With regard to claims 16-19, Forster et al. (i.e., Fig. 1) show an apparatus and a method for regulating a current of a circuit comprising means (4) for generating a regulated signal, means (21) for sensing/monitoring the regulated signal, means (7, 8, 16) for generating a second control signal which utilizes a current source (8) and a resistor (16), means (10, 6) for adjusting a magnitude of the regulated signal based on the second control signal and the regulated signal that includes an amplifier (6).

- 3. Claims 1-15 are allowable over prior art.
- 4. The following is an examiner's statement of reasons for allowance of claims 1-15: none of prior art of record taken alone or in combination shows an apparatus for regulating a current comprising a regulation circuit, a first resistor, a second controller, a

Application/Control Number: 10/657,575

Art Unit: 2838

controller along with specific electronic connections among those elements and particular functions thereof and more detailed elements as recited in the claims of the instant application.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Melbert (U.S. Pat. No. 4,731,574), Main (U.S. Pat. No. 4,808,907), Carter et al. (U.S. 5,138,658), Chiu (U.S. Pat. No. 6,496,052) and Biagi (U.S. Pat. No. 6,703,815) also disclose apparatuses for regulating a current in a circuit, each of which comprises a control circuit that controls the activation of a main transistor based on a result of a comparison in an amplifier between a sensed current and a reference signal level.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew V. Nguyen whose telephone number is (571) 272-2081.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (571) 272-2800.
